**PF-RS4**  
Plaster Frame  
Monture en Plâtre

## lighting functions

Think of room lighting in three categories: general lighting, task lighting and accent lighting. General lighting illuminates a room for ordinary activities without focusing on any area in particular. Task lighting concentrates on a work or reading area. While accent lighting brings attention to the decorative features of the room.

When planning lighting for a living room, start with accent lighting, and then task lighting. In some cases, the combination of these two may provide sufficient room light so that additional general lighting isn't needed.
